                                                                                                                                                                                                                                                                                                                                                                                                                                                    pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                               799.5

The cDNA was isolated from a human liver cell cDNA library, a from tissue localisation studies has been found to be expressed only it he liver. The protein has homology with the rat organic cation excretion, and this sequence may have a similar function. The protein may be used to raise specific antibodies, as assay reagents, as diagnostic tissue markers, for the isolation of cognate receptors, in the control of the companion of cognate receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ligands and binding proteins, and as biologically active agents. Nucleotides encoding the protein may be used as primers and probes or antisense molecules, and in gene therapy. Cells transformed with these nucleotides may be used to screen for agonists and antagonists which are potentially useful therapeutically.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  181
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence

OAT's are membrane proteins that facilitate the transport of organic anions across the cell membrane. The mechanism of transport is thought to be a secondary or tertiary active transport involving exchange active transport involving exchanges for another organic anion. HoAT2A and hOAT2B are thought to be splice variants as they are encoding them, may be used in the prevention, treatment and diagnosis
                                                              of diseases associated with inappropriate hOAT expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence

Human proteins and DNA encoding sequences useful for preventing, treating or ameliorating a medical condition in a mammalian subject e.g. arthritis and cancer – $\,$

Claim 20; Page 235-236; 1963pp; English.

Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and CC sequences ABA08225-ABA09574 represent nucleic acids encoding them. The CC invention also relates to vectors and recombinant host cells comprising a CC invention also relates to vectors and recombinant host cells comprising a CC nucleotide of the invention, methods of producing the novel polypeptides, antibodies against the polypeptides, methods of detecting the nucleotides CC or polypeptides in a sample, and methods of identifying compounds which CC bind to polypeptides of the invention. Although novel, many of the CC polypeptides of the invention have homology to known proteins, thereby CC quing an insight into their probable biological activities, and hence CC potential therapeutic applications. The polypeptides of the invention may CC have various activities; including cytokine, cell proliferation or cell CC differential therapeutic applications of the invention ccll CC differential to activities; stem cell growth factor activity; cc haematopolesis regulatory activity; tissue growth activities; cremothation or chemokinetic activities; haemastatic, thrombotic or chemokinetic activities; haemastatic, thrombotic or may be thrombolytic activities; receptor or ligand activities; or may be involved in oncogenesis, cancer cell proliferation or metastasis. Depending on their biological activities, polypeptides and nucleotides of the invention are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Such conditions include cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell disorders, chronic inflammatory conditions (e.g., asthma or arthritis), proliferative retinopathy, atherosclerosis, coronary heart disease, arterial ischaemia, bone disorders (e.g., osteoporosis), and abnormal vascular growth. Polypeptides involved with tissue regeneration and repair (or nucleic acids encoding them) may be used to promote wound healing (e.g., of burns, incisions and ulcers), while those with immunomodulatory activities may be used in the treatment of viral, bacterial and fungal infections in addition to immune disorders. Polypeptides with growth factor activity may be used in cell cultures to promote cell growth. For example, such polypeptides may be used to manipulate stem cells in culture to give rise to neuroepithelial cells that can be used to augment or replace cells damaged by illness, autoimmune disease or accidental damage. The polypeptides and nucleotides also be used in the diagnosis of the above conditions, and in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Homo sapiens.
                                                                                                                                                                                                                                                          The sequences given in AABA7271-76 represent human organic anion transporter (hOAT) polypeptides. hOAT polypeptides are preferentially expressed in the liver and kidneys of humans. OAT's are membrane proteins that facilitate the transport of organic anions across the proteins that facilitate the transport of organic anions across the cell membrane. The mechanism of transport is thought to be a secondary cell membrane transport involving exchange of another organic anion. hoAT2A and hoAT2B are thought to be splice variants as they are identical except at the C-terminal end. hoAT proteins and the DNA encoding them, may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate hoAT expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            12-JUL-2000; 2000WO-US18980.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         18-JAN-2001.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        leukaemia.
The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, the uncoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide in gene therapy. A composition containing a polypeptide or polynucleotide in gene therapy and seripheral nervous system, such as peripheral nervous system diseases, such as localised neuropathies and central nervous system disease, such as localised neuropathies and central nervous system disease, such as localised neuropathies and central nervous system disease, amyotrophic Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    29-NOV-2000; 2000US-0727344
                                                                                                                                                                                                                                        Novel nucleic acids and polypeptides, useful for treating disorders such as central nervous system injuries \boldsymbol{\cdot}
                                                                                                                                                                                                                                                                                                                                                                                                                                   (HYSE-) HYSEQ INC.

types which express the proteins. The polynucleotide molecules can be responses. The proteins and antibodies are useful in diagnosis and proteins. The proteins and antibodies are useful in diagnosis and proteins. The proteins are also useful for prevention or treatment of proteins are also useful for prevention or treatment of burns, incisions, ulcers, periodontal diseases, central and peripheral and to induce cartilage and/or bone growth in cosmetic plastic surgery. Treatment of lung or liver fibrosis, for stimulating blood cell treatment of lung or liver fibrosis, for stimulating blood cell of bone marrow transplantation patients.
    Sequence
                                                                                                                                                                                                                                                                                        AAB19393-B19407 represent secreted human proteins. The secreted proteins are useful in assays to determine their biological activities. The proteins can also be used as biomarkers to identify tissues or cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, the encoded polypeptides (AAM38642-AAM42213) with nootropic, consumpressant and cytostatic activity. The polynucleotides are useful consumpressant and cytostatic activity. The polynucleotide or polynucleotide consumpressant and cytostatic activity. The polypeptide or polynucleotide consumpressant and composition containing a polypeptide or polynucleotide consistency of the peripheral nervous system diseases, such as consistency and central nervous system diseases, such as consumpressant activity and central nervous system diseases, anyotrophic constant sclerosis, and shy-Drager Syndrome. Other uses include the constant of the activities such as: Immune system suppression, activity, chamotactic/chemokinetic activity, haemostatic conditions activity, chamotactic/chemokinetic activity, haemostatic conditions activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and constants and constants are proposed to the constants and constants are proposed to the constants and constants and inflammation, leukaemias and constants are proposed to the constants and constants and constants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      21-JAN-2000; 2000US-0488725.

OAT4 has nephrotrophic activity. The OAT4 transporter, designated OAT4. OAT4 has nephrotrophic activity. The OAT4 protein and encoded gene are useful in studying causes of abnormality, including the application of a variant nucleic acid as a probe to detect the presence of a gene encoding the transporter OAT4, or to identify or the presence of a gene encoding the transporter OAT4, or to identify or quantify such gene, and in developing drugs to prevent or treat various quantify such gene, and in developing drugs to prevent or treat various
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            placental organic anion transporter gene and encoded polypeptide OAT4, useful in studying causes of abnormality, and in developing drugs to prevent or treat various kidney diseases and abnormal fetal growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 2; Page 26-28; 32pp; Japanese.

The present sequence is human protein with hydrophobic domain, Hp03613.
The polynucleotide and polypeptide of the invention may be used in the prevention, diagnosis and treatment of diseases associated with the interpretate polypeptide expression. The polynucleotides may be used cell and culturing the cell to express the protein. The polynucleotides can be used its complementary sequences may also be used as DNA probes in the golynucleotides may sequences may also be used as DNA probes in the production of antibodies and in assays and also used in gene therapy. The polypeptides may complementary sequences may also be used as DNA probes in the production of antibodies and in assays and also used in gene therapy. The polypeptides may complements of polypeptide expression and activity. The complements, in the production of antibodies and in assays to modulate cytokine and cell proliferation activity, to modulate complements, immune stimulation or suppression (e.g. for the treatment of microbial

NX Nucleic acids encoding a range of human polypeptides, useful in genetic production, testing and therapy.

Nucleic acids encoding a range of human polypeptides, useful in genetic production, testing and therapy.

XX Claim 20; Page 597; 765pp; English.

XX The invention relates to novel human secreted polypeptides. The CC polypeptides and antibodies to the polypeptides are useful for control of the polypeptides are useful for identifying agents (agonists and antagonists) that bind to them. Cells capressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising compineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopoiesis; and in treatment of leukaemias. Anu29510-Anu33304 represent the amino acid sequences of novel human secreted proteins of the invention.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          216.5

FACILITATIVE GLUCOSE TRANSPORTER. THIS ISOFORM LIKELY MEDIATES THE BIDIRECTIONAL TRANSFER OF GLUCOSE ACROSS THE PLASMA MEMBRANE OF HEPATOCYTES AND IS RESPONSIBLE FOR UPTAKE OF GLUCOSE BY THE BETA CELLS; MAY COMPRISE PART OF THE GLUCOSE-SENSING MECHANISM OF THE BETA CELL. MAY ALSO PARTICIPATE WITH THE NA(+)/GLUCOSE COTRANSPORTER IN THE TRANSCELLULAR TRANSPORT OF GLUCOSE IN THE SMALL INTESTINE AND KIDNEY.
SUBCELLULAR LOCATION: Integral membrane protein.
TISSUE SPECIFICITY: IN EMBRYO, EXPRESSED IN ENDODERM LAYER OF YOLK SAC AND LIVER PRIMORDIUM.
                                                                                                                                                                                                                                                                                                                                                                                  TRANSPORTER SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Acids Res. 17:6386-6386(1989).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MEDIATES THE BIDIRECTIONAL TRANSFORTER. THIS ISOFORM LIKELY MEDIATES THE BIDIRECTIONAL TRANSFER OF GLUCOSE ACROSS THE PLASMA MEMBRANE OF HEPATOCYTES AND IS RESPONSIBLE FOR UPTAKE OF GLUCOSE BY THE BETA CELLS; MAY COMPRISE PART OF THE GLUCOSE-SENSING MECHANISM OF THE BETA CELL. MAY ALSO PARTICIPATE WITH THE NA(+)/GLUCOSE COTRANSPORTER IN THE TRANSCELLULAR TRANSPORT OF GLUCOSE IN THE SMALL INTESTINE AND KIDNEY.

SUBCELLULAR LOCATION: INTESTINE AND KIDNEY.

TISSUE SPECIFICITY. DEPCENDED.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               TISSUE SPECIFICITY: PRESENT IN LIVER, INTESTINE, KIDNEY AND BETA-PANCREATIC ISLET CELLS.
SIMILARITY: BELONGS TO THE SUGAR TRANSPORTER FAMILY. GLUCOSE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       TRANSPORTER SUBFAMILY.

HATTORY DIA GYRASE NEGATIVELY SUPERCOILS CLOSED CIRCULAR DOUBLE-
STRANDED DNA IN AN ATP-DEPENDENT MANNER AND ALSO CATALYZES THE
INTERCONVERSION OF OTHER TOPOLOGICAL ISOMERS OF DOUBLE-STRANDED
DNA RINGS, INCLUDING CATEMANUS AND KNOTTED RINGS.

-!- CATALYTIC ACTIVITY: ATP-dependent breakage, passage and rejoining
of double-stranded DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Haft D.H., Hickey E.K., Peterson J.D., Nelson W.C., Ketchum K.A., McDonald L., Utterback T.R., Malek J.A., Linher K.D., Garrett M.M., Stewart A.M., Cotton M.D., Pratt M.S., Phillips C.A., Richardson D., Heidelberg J., Sutton G.G., Pleischmann R.D., Eisen J.A., White O., Salzberg S.L., Smith H.O., Venter J.C., Fraser C.M., Salzberg S.L., Smith H.O., Venter J.C., Fraser C.M., "Byidence for lateral gene transfer between Archaea and Bacteria from
